Below is the Prezi link. It works and it's a great short presentation.

Here's the link to our Prezi. Let me know how it goes for you! I think it will be under 5 minutes.

Thanks….it must be a big deal if the City manager, the director of water resources and the assistant director via my supervisor and council staff have all asked that I re-inform you☺ The new council must be stringent on time limits and have a lot to fit in… thanks for understanding!

Got it!

Morning Michael,

Not only has our council staff asked me numerous times to remind you that your entire talk including intros to council is a total of ten minutes but now my manager via the City Hall manager has also asked that I re-remind you.

So, if you take 5 minutes to introduce yourselves and the program you have five minutes to present

findings. Please do not over step this as we will lose this opportunity for others.

Thanks for understanding. Michelle

Hi Michelle--the kids are using a Prezi, which needs wifi connection and a projector/presenter. I can send you the email address/pw if that works.

Also, your earlier email said you needed it by the end of month--can we still work on it until then? Would the 31st be too late? I had some things come up in the classroom that interfered with getting the presentation finished.

Thank you,
Michael

Morning Michael,

Will you please let me know if your students will be using a power point presentation or neo. And if they are please send it to me this week. Thanks. Michelle

Subject: Re: doc with highlights

Here's what I have for the three highlighted portions. Michelle, tell me if they are sufficient; Stephanie, let me know if I've described things correctly from your perspective!

..Title
Presentation of School-Based Water Quality Monitoring and Student GREEN Congress

Presenter(s):
JuneLin McGauley
Felix Brockman
Felix Pugh
Austin Mjolsnes
McKenna Griffith
Natasha Thompson
Piper Hendrix
Tekla Frisina

Background and Analysis: of topic
Students in Michael Stine's 4th/5th Grade class at Lincoln Options Elementary, with

support from Project GREEN and the Thurston Conservation District, conducted regular water quality monitoring of Moxlie Creek in Watershed Park. 8 students then attended a regional symposium at The Evergreen State College where they presented and analyzed their data along with multiple other schools in the area. They also attended workshops led by environmental professionals.

Looking forward to this!

Michael
