

One-Side Road Collection

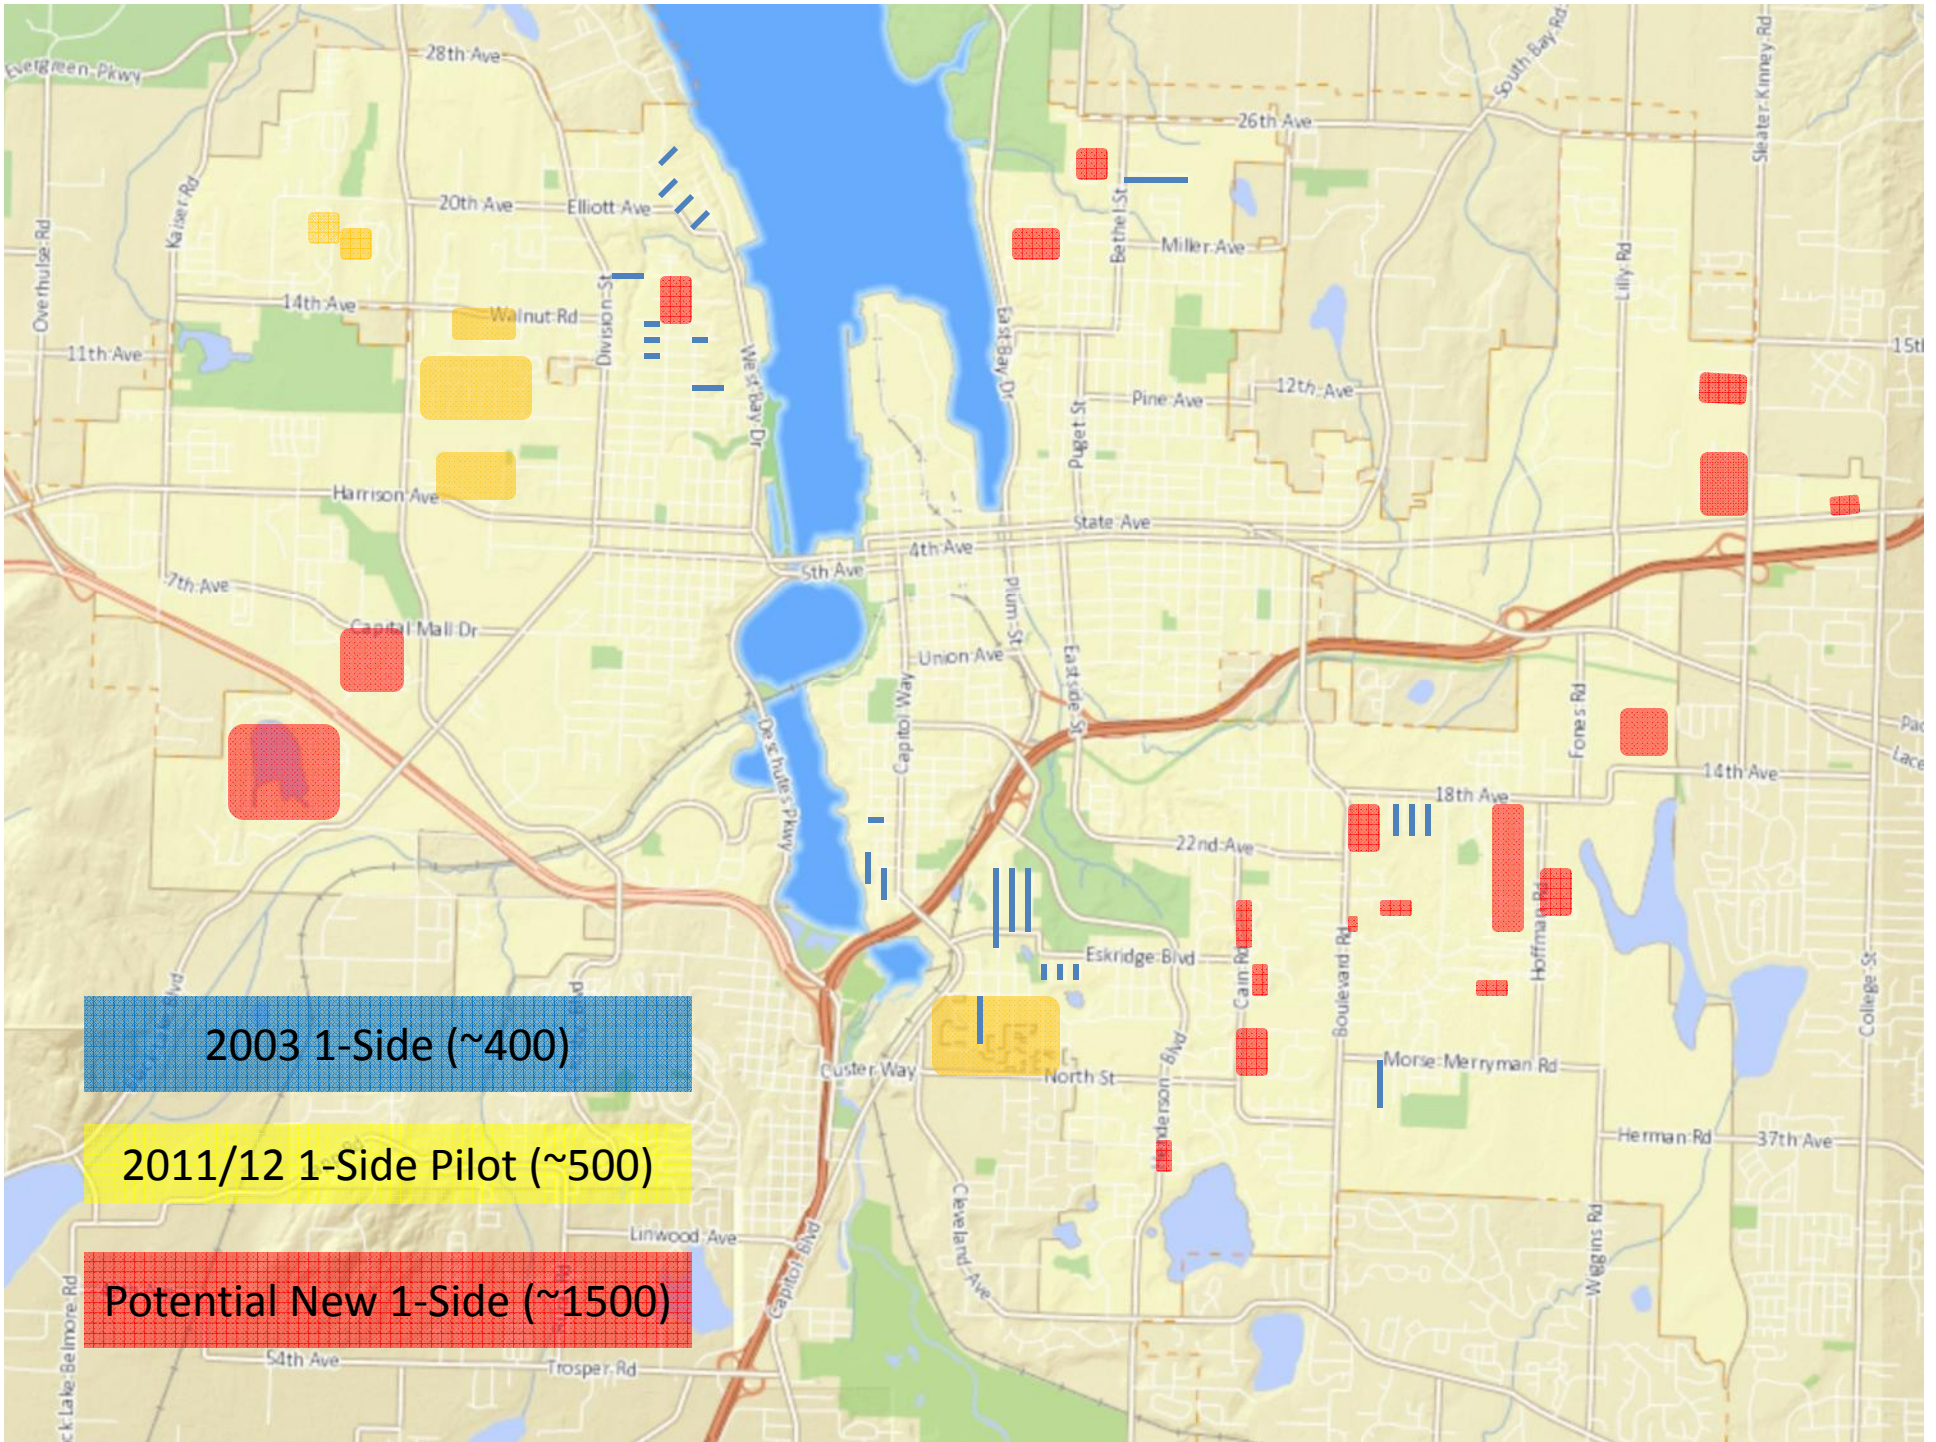

UAC Deliverable:

Seeking input from UAC and recommendation to Council in support of one-side road collection as an operational practice where practical and feasible.

Implementation Criteria: Safe & Efficient

- Loop-style roads, pocket neighborhoods and areas with limited connecting roads
- Avoid major arterials and collectors
- Ease of communication to residents
- Available space for carts

2003 1-Side (~400)

2011/12 1-Side Pilot (~500)

Potential New 1-Side (~1500)

What are the benefits to one-side road collection?

- Time savings of 20%
- Mileage reduced by 40 – 50%
- Reduced truck traffic in neighborhoods
- Creates operational capacity (1 hour / 1,000 customers)
- Emphasizes safety
 - Right-hand turns as much as possible
 - Minimizes or eliminates backing for oddly placed carts

What are customer concerns?

- Increased distance to take cart across road or having neighbor's cart in front of home
- Children's safety when it's their job to take out trash and recycle
- Concerns of equity: one-side customers doing more than those using both sides of road
- On-street parking and blocking mailboxes
- Challenging if neighbors do not get along.

One-Side Road Collection

Questions | Discussion | Direction

Establish one-side road collection as an operational practice where it is feasible and practical.
