Engineering Design and Development Standards (EDDS)

The EDDS are the technical implementation of the Goals and Policies outlined in the Comprehensive Plan related to;

- public utilities, and
- street frontage improvements placed or constructed in the ROW.

The EDDS;

- ensure that we meet technical, safety and health standards for what is installed above and below ground in the Right of Way
- are found at the [City's website](http://www.codepublishing.com/WA/Olympia/?EDDS/OlympiaEDDSNT.html) by typing EDDS into the Search Bar on the main page, or by keying in; www.codepublishing.com/WA/Olympia/?EDDS/OlympiaEDDSNT.html
- are the framework that provides a consistent application of the Standards to various sites/projects.
- include text, tables and standard drawings.
- are updated on a regular basis in order to ensure infrastructure is constructed to the most current, applicable, standard.
- apply to both Private Development projects as well as Capital Improvement projects constructed by the City.

Infrastructure; water, sewer, storm, reclaimed water, streets and sidewalks are the very foundation of a thriving community. The EDDS provide clarity in achieving that outcome.
