

Snapshot: *Regional Climate Mitigation Plan*

PHASE 1

What's Done: Phase 1 assessed the implementation status of local climate policies and actions to reduce communitywide (public-sector and private-sector) greenhouse gas emissions in Thurston County, Olympia, Lacey, and Tumwater. Phase 1 also recommended that the jurisdictions adopt a common emissions baseline and science-based targets to guide Phase 2.

- **Baseline and Targets:** Reduce communitywide emissions 45% below 2015 levels by 2030 and 85% below 2015 levels by 2050.
- Working collaboratively toward the shared targets is essential to ensuring each jurisdiction does its part to keep the global average temperature from rising 2 degrees Celsius above pre-industrial levels by 2100.

Previous work:

- Emissions inventories for the participating jurisdictions;
- Actions from previous planning work (e.g., Lacey's CR2 strategy and TRPC's Sustainable Thurston plan) that could be expanded or enhanced;
- Energy consumption and emissions data gathered for the countywide "carbon wedge" analysis consultants prepared for TRPC in 2017; and,
- Climate impacts assessments and community engagement materials prepared as part of TRPC's companion Thurston Climate Adaptation Plan.

What's Next: Policymakers adopt the emissions targets via resolution and commit to funding Phase 2 in 2018, so work can begin on Phase 2 in early 2019.

- **Phase 2 Cost and Timeline:** \$175,000. Expected to take up to 18 months to complete.
- The total cost split evenly by each participating jurisdiction (\$43,750 per jurisdiction).

PHASE 2

What's Next: Phase 2 will focus on mitigation action analysis, implementation, and accountability to ensure that participating jurisdictions hit the shared emissions targets. Key Phase 2 deliverables include:

- A regional **Public Engagement Strategy** to help residents understand climate change impacts, elicit action ideas, and promote implementation efforts;
- An evaluation and any needed supplementation of the **Emissions Inventory** completed by the Thurston Climate Action Team;
- A **list of communitywide actions** to reduce public- and private-sector emissions. A Consultant Team will qualitatively and quantitatively assess such actions and help identify funding sources, leads, partners, and implementation timeframes.
- An **Implementation Strategy** for each participating jurisdiction. Policymakers and staff will inform development of their jurisdiction's Implementation Strategy, which will include a mix of actions that all four parties will take, actions that a single or subset of jurisdictions will implement, and actions that need to be implemented by other public and private interests.
- A **Carbon Wedge Analysis**, or other analytical tool, that measures the cumulative impact of the recommended actions to ensure they're sufficient to hit the shared emissions targets.
- **Metrics** to gauge accountability and periodically track progress implementing actions.

BENEFITS

- Coordinates public-sector implementation of actions across the county
- Educates residents about climate risks and responses, and catalyzes private-sector action implementation
- Quantifies the speed and scale of actions necessary to hit the shared 2030 and 2050 emissions targets
- Helps the region's jurisdictions speak with a unified voice when engaging with Puget Sound Energy, Legislature, etc.

Note: As in Phase 1, Phase 2 focuses on production-based emissions only and does not include consumption-based emissions.
